SNARKY PUPPY CHOOSES HEAR BACK PRO FOR RECORDING **Group used personal headphone mixing system on new album**

Grammy-winning American jazz ensemble Snarky Puppy just recorded their latest album, “Empire Central,” and Hear Technologies was proud to provide a Hear Back PRO personal headphone mixing system for the entire band.

The 19-piece band set up their recording space in Dallas, Texas. They used a Hear Back PRO Hub loaded with analog input cards. Their digital audio workstation sent feeds to an interface, and then on to the Hear Back PRO Hub. Then, the Hub sent the signal to PRO Distro breakout boxes to keep excess cabling to a minimum. From there, short cable runs fed from each PRO Distro to Hear Back PRO Mixers. With this setup, each musician and most attending the listening session could easily adjust their own headphone mix in real time. Snarky’s recording engineer, Nic Hard, said the session went great.

“Empire Central” is scheduled for release Sept. 30.

Hear Technologies is a world leader in pro audio and monitoring equipment for live performances, recording studios, and worship. Designed and built in the U.S., our knob-based cue systems make personal monitoring easy. Hear Technologies products can be found in studios, live productions, houses of worship, and elsewhere around the world. For more, visit HearTechnologies.com.
